

### Contemporary Research Tuners Used in Three of Five ARCHI-TECH AV Awards

Every year the best audiovisual architectural projects in the industry are honored with InfoComm/ARCHI-TECH AV awards. This year five projects were recognized at InfoComm2010 in Las Vegas, and we are proud that three of them, including both Grand Prize winners, employed Contemporary Research 232-ATSC HDTV tuners. The three CR customers are:

**The Center for Connected Medicine**, Pittsburgh, PA., which won the Grand Prize for the “Best Over \$1 Million.” The project team was The Sextant Group, The Design Alliance Architects and SoundCom Systems

**Autodesk**, Waltham, MA, which won the Grand Prize for “Best Under \$1 Million.” The project team was Office Environments of New England, Klingstubbins and ACT Associates.

**Fox News Network**, New York, NY which won a prize for its new TV news set. The project team was McCann Systems, Clickspring Design and Showman Fabricators.
