

FOR IMMEDIATE RELEASE

Contemporary Research Intros Speaker Solutions

DALLAS, August 1, 2008

Contemporary Research introduces a new line of studio-quality, efficient speakers, designed for use with the new 232-Amp Stereo Mixer/Amplifier and PoleCat™ video projection integration tools. While there are many speaker options for audio installers, the CR team looked for better features in efficiency, clarity, dispersion, and quality than currently available.

To that end, CR worked with a leading speaker manufacturer to custom-create two new solutions for ceiling and wall-mount classroom and small-room installations. The SA-615 ceiling speaker system features a coaxial 6.5" speaker with exceptional efficiency, 144° dispersion, and integrated plenum and UL listed back can, grill, and tile bridge. The CS206 surface-mount speaker's 6.5" speaker and 13mm tweeter delivers efficient, studio-quality sound in a black or white enclosure, with solid wood construction for a warmer tone.

Doug Engstrom, CR's Communication Director comments, "The 232-Amp, with its miniature size, green-power Class D amplification, and programmable RS-232 mix/ducking features introduces a fresh concept for small-room corporate and classroom installations. When you're saving power wisely, you need to consider the efficiency of the whole system. Of course, a number of other speakers on the market can do the job. Our goal is to distribute sound with good clarity using less speakers and less power than older technology."

About Contemporary Research

Contemporary Research designs and creates solutions for an HDTV world, offering cutting-edge products, HDTV display control, digital signage, and tuning. In addition, CR supports a proven line of analog TV tuners, closed-captioning tools, as well as commercial and educational media systems. For more information about Contemporary Research products, visit us on the web at www.crwww.com or call (888) 972-2728.
